

COLORBAR

- Iterated through several different options to find an interesting color scheme given the spread of the data.
- Decided on this one here.
- Later discovered that this may actually not be a good choice as it is a cyclic (however, quite subtle) making it hard or impossible to know which day(s) had no listening or maximum listening.
- Design Feature – remove color bar title “Listening Hours” to improve aesthetic with minimal info loss. Also extend bar along the entire length
